

Using Internet Download Manager (IDM) in Windows operating system

First, <u>download</u> software and then install it. Follow the steps below to install:

How to activate the software by Patch

- Unzip the file.
- Install the software, but do not click the Finish button at the end.
- Disable your antivirus when using the patch.
- Right-click on the Patch file and select Run as administrator and click on the Patch button.
- If you see the message Windows protected your PC, click More info=>Run anyway.
- If you see the Fake Serial error, download and run the IDM Register Cleaner file and run the

Run Key.reg file again.

The picture below is an overview of the software:

🔮 Internet Download Ma	anager 6.42				- 🗆 X
Tasks File Downloads	View Help Registration				
Add URL Resume	Stop Stop All Dele	ete Delete Co Options	Scheduler Start Qu S	top Qu Grabber Tell a Friend	
Categories X Al Downloads Compressed Documents Compressed Documents Compressed Comp	File Name	Q Size Status I I I </td <td>Time left Transfer rate Image: Imag</td> <td>Last Try Description Image: Constraint of the sector of the sec</td> <td></td>	Time left Transfer rate Image: Imag	Last Try Description Image: Constraint of the sector of the sec	

To schedule your downloads, select Scheduler and download queues from the section below

Then click the new queue option:

2	Main download queue					
Queues	Schedule Files in the queue					
Main download gueue	One-time downloading					
C Synchronization queue Download limits	Start download on IDM startup					
	Start download at 11:00:00 الم					
	Once at اسفند 1402 آسفند 0 آ					
	O Daily Sunday Wednesday Saturday Monday Thursday Tuesday Friday					
	Stop download at 07:30:00 کچی قرط 07:30:00 میل					
	Open the following file when done:					
	Hang up modem when done Exit Internet Download Manager when done					
	Turn off computer when done Shut down					

For example, the start time of the download is 01:00 am and the end time is 7:30 am. We can also specify the day of the download and then apply the changes and save.

Using Xtreme Download Manager (XDMAN) in Linux operating system

Xtreme Download Manager (XDMAN) software is equivalent to IDM download manager in Windows. It can connect to the Internet at a certain time, download the files you want, shut down or turn off the computer after finishing work. It also supports the speed limiter.

To install this software, just run the following commands in the terminal:

- sudo add-apt-repository ppa:noobslab/apps
- sudo apt-get update
- sudo apt-get install xdman-downloader

Another way to install that software file is to <u>download</u> it and then go to the directory of the downloaded file and run the following commands in the terminal:

- tar -xf xdm-setup-7.2.11.tar.xz
- sudo ./install.sh

If you run the software, the following screen will be displayed first, so that you can select and apply the settings related to your preferred browser:

To **set the schedule**, click on the software settings and go to the Scheduler Settings section and apply your desired settings:
